

SPECIFICATION SHEET – PVC flange guard

The PVC shield is manufactured from heat-sealed Polyvinyl Chloride and is designed to provide a 'budget' or short-term solution for low corrosion, pressure and temperature applications. It includes a 'litmus' leak indicator patch contained within a clear PVC window

The easy to fit lock tight fastening system comprises Velcro strip, coupled with draw strings. When tightened the fabric is drawn over the flange bolts to eliminate spray out.

Typically used for water-based liquids and particularly low-concentration chemicals. Each shield comes with external litmus indicator patch.

Specification

Max. Temperature	:	60 Deg C / 150 Deg F
Flange Ratings	:	ANSI 150 – 300lb DIN PN6 – PN25
Pipe Sizes	:	¼"(10mm) – 24"(600mm)
Typical Applications	:	Flanges, Elbows, Tees, Couplings

Delivery
Most shield materials and sizes are available ex-stock; however, in case of low availability delivery may take 2-4 working weeks.

If you have a specific delivery date requirement complete your order to the checkout stage and phone us on 0845 607 8227 to confirm current stock levels
